Dakota Heim

Senior Software Developer
Dayton, OH • (801) 427-9988 • kotieheim@gmail.com • linkedin.com/in/dakotaheim • github.com/Kotieheim

SUMMARY

Senior Software developer with 6+ years building production web applications, APIs, and cloud-ready systems for enterprise and global restaurant brands. Deep in Vue, React and TypeScript on the front end, with Node.js and Go services, PostgreSQL, and Redis behind them. Leads cross-functional initiatives, owns Docker-based CI/CD, and mentors developers through code reviews and pairing. Partners with client teams on high-visibility systems and releases for global restaurant brands, from pricing integration through production launch. Uses AI-assisted development tools daily and has shipped AI-driven data tooling to production.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Vue, Svelte, HTML/CSS, responsive design
Backend & APIs: Node.js, Go, REST APIs, WebSockets, microservices, rules-engine / JSON state models
Data: PostgreSQL, Redis (caching), data modeling, ETL-style processing
DevOps & Cloud: Docker, CI/CD pipelines, feature flags, containerized deployments, Git, monitoring and alerting
AI & Tooling: AI-driven data pipelines, AI-assisted development (Copilot, Claude, Cursor)
Practices: Agile/Scrum, automated testing, code review, technical documentation, mentorship

PROFESSIONAL EXPERIENCE

Stratacache

Senior Software Developer · January 2025 – Present

- Architect a next-generation platform built on a rules-engine-driven JSON state model that powers dynamic web applications for all client brands.
- Added Redis caching to a high-traffic Go pricing API receiving requests from ~15,000 devices every 15 minutes allowing 1k calls per minute to the cache DB.
- Built AI-driven tooling that converts image data into structured datasets feeding internal systems, replacing hundreds of manual work.
- Lead cross-functional initiatives across engineering and DevOps teams of 5-10 people in an Agile/Scrum environment.
- Raised deployment reliability with Docker-based CI/CD workflows and feature-flag rollouts, removing human error.

Intermediate Software Developer · July 2022 – December 2024

- Designed custom Docker CI/CD pipelines that automated complex build and deployment workflows, cutting manual build times drastically
- Built internal QA tooling that simulates API and WebSocket traffic, giving the team reliable, repeatable test environments.
- Mentored 5-10 developers through code reviews, pair programming, and Agile ceremonies.
- Established documentation standards that shortened new-developer on-boarding from 4 weeks to 2 weeks.

JPMorgan Chase

Software Engineer · October 2021 – July 2022

- Delivered enterprise banking features inside JPMorgan's internal application framework.
- Helped decompose monolithic applications into modular services and APIs.
- Built React proof-of-concept apps that supported the modernization of the chase.com frontend architecture.

Stratacache

Software Developer · May 2020 – October 2021

- Built pricing-integration APIs enabling real-time menu and price updates for global restaurant brands across many locations.
- Developed greenfield applications and supported high-availability production systems.
- Coordinated releases across high-visibility client repositories.

EDUCATION & TRAINING

- **Utah Valley University** — Coursework toward B.S. in Computer Science
- **Bloc** — Remote Web Developer Track, Certificate of Completion
